EDUCATION

Indiana University Bloomington, Luddy School

Aug 2025 – May 2027

Master of Science in Computer Science

Relevant Coursework: Applied Machine Learning · Large Language Models · Software Engineering II · Engineering Cloud Computing · Applied Algorithms · Applied Database Technology

University of Pune, India

May 2019

Bachelor of Engineering in Electronics and Telecommunication

TECHNICAL SKILLS

Frontend: React, Redux, Next.js, TypeScript, JavaScript, HTML5, CSS/SCSS, Tailwind CSS

Design Systems: Component APIs, Design Tokens, Figma-to-Code, Accessibility (WCAG 2.1 AA), NX Monorepo, Bit Cloud

Backend & DB: Node.js, Java Spring Boot, Python, PostgreSQL, MySQL, Snowflake

ML / AI: PyTorch, HuggingFace, GPT API, DeBERTa NLI

Tools: Git, GitHub Actions, CI/CD, Jira, AEM, Sanity CMS, Microsoft Azure (AZ-900)

WORK EXPERIENCE

Senior Software Developer, Accenture

Oct 2019 – Jul 2025

Pune, India · Enterprise frontend at scale: React, TypeScript, design systems, monorepo

- Architected and shipped **100+ production React components** across a global Fortune 500 web platform, including a locale-aware cookie consent component (Global Privacy Control) serving **millions of users across dozens of markets**, WCAG 2.1 AA compliant and brand-themeable via a single prop API.
- Designed and built a **reusable Global Footer component** deployed across every domain-owned page; engineered a flexible prop API to handle infinite regional, legal, and navigational variants from a single codebase.
- Led migration from **monolithic to monorepo architecture** using NX and Bit Cloud, establishing component versioning, distribution standards, and cross-team reuse patterns adopted across the engineering org.
- Built a **dynamic Diagnostics-as-a-Service system** using Microsoft Adaptive Cards rendered in a React shell, enabling real-time customer troubleshooting flows and reducing support escalation rates significantly.
- Improved **web performance by 30%** on targeted pages through code-splitting, lazy loading, and asset optimization; boosted **SEO by 30%** via automated sitemap generation and structured metadata tooling.
- Developed **VideoHub**, a categorized video database page organizing large collections with advanced filtering, search, and navigation for global user bases.

Associate Instructor, Indiana University, Luddy School

Aug 2025 – Present

Course: Design and Development of an Information System (Capstone)

- Mentored **4 student project teams (16 students)** through the full lifecycle of full-stack system design, from sprint planning through architecture, code review, and final demo.
- Provided structured technical feedback on deliverables and held weekly office hours; collaborated with faculty on grading standards and evaluation consistency.
